Introduction

At just 8 ¾" deep, the Briza is the ultimate hydronic fan coil for quiet, space-saving heating and cooling. Tucked into the wall or ceiling in ducted or nonducted installation, Briza 22 includes a high-quality aluminum-copper dynamic coil with hydrophilic coating. Powered by an EC Motor for less energy consumption, it produces less noise and has a longer lifetime than most other fan coils available! A non-ducted Briza 22 can cover up to 27' of horizontal air throw and remain under 35dBA.

Briza 22 is easy to install and ideal for non-ducted or ducted installations as a space saving solution. Use the compact Briza 22 fan coil in the ceiling and its space-saving design can allow for the addition of another floor within a given building height.

Briza can easily handle up to 0.4" of external static pressure for ducted installations.

Ventilation with Briza 22 is also possible with addition of the air mixing box.

Features

EC MOTOR TECHNOLOGY

for less electrical energy consumption

LOW NOISE LEVEL

with up to 27' of horizontal air throw at under 35dBA

COMPACT DESIGN

the slimmest fan coil on the market available in 5 lengths

VERSATILE CONNECTIONS

available in a 2- and 4-pipe system and various supply and return options

0...10V CONTROL

enables modulating control, using the latest home automation and building management systems

WHISPER QUIET

due to the balanced, isolated, EC motor/blower

About Briza 22

Jaga Briza 22 is suitable for renovation projects, climate control of homes, shops, office spaces, school buildings, hotels and meeting rooms. It can be connected to an air to water heat pump to provide powerful, economic heating and cooling anytime of year.

- 0-10V interface solution for Building Management Systems (BMS)
- Heating and /or cooling
- High-quality, aluminum-copper, dynamic coil with hydrophilic
- Built-in to wall or ceiling
- Available in 6 lengths
- 2-pipe or 4-pipe-system
- Easy installation
- Various supply and return air options
- Low noise level
- EC-motor for standard or ducted (HP) applications
- Optional integrated on/off fan controller

Jaga N.V. uses the exclusive GreenTech EC technology of EBM-PAPST.

Jaga N.V. uses the exclusive GreenTech EC technology of EBM PAPST. Permanent magnet BLDC motor with inverter integrated in the fan assembly, protection rating IP44, insulation class F and ball bearings. BLDC motors directly integrated with the fan assembly and inverter and 32% reductions in electricity consumption compared to traditional AC motors. Polypropylene (PP) housing. Centrifugal fan with forward-curving blades made of glass-filled polyamide PA 6.

Conformity with 2017 ErP Directive.

EC Greentech EBM-PAPST motor: faster, more powerful, more economical, more sustainable

EC technology: intelligent, low-energy use and eco-friendly. EC motors cut operating costs, reduce the impact on the environment and impress with their quiet operation.

With the introduction of the electronic commutation or EC motors, we take the next step into the direction of low-energy consumption, less noise and a longer lifetime.

Main parts

- 1 Aluminum-copper coil with hydrophilic coating
- 2 Hydraulic connection: $\frac{3}{4}$ " standard left
- 3 Internal frame in reinforced galvanized steel
- 4 Condensate drain, connection $\frac{3}{4}$ "
- 5 Centrifugal fan(s) with double inlet
- 6 Replaceable 1, 2 or 4" MERV 8 or 13 filter
- 7 Electrical connection, standard right*

*Same side upon request.

BRIZA 22

GENERAL TECHNICAL DATA

Briza 22 primary coil

High-quality coil for heating and cooling

The coil consists of 4 rows of round seamless tubes made of pure red copper, connected to aluminum fins with a hydrophilic coating. It includes an integrated hydraulic header, including an air vent. Connection $\frac{3}{4}$ " NPT left, also available with righthand side connection.

- Heating and cooling coil in 2-pipe configuration
- Cooling coil in 4-pipe configuration

2-pipe system:

- A 2-pipe fan coil system consists fan coil units with a single coil connected to two pipes (one supply pipe and one return pipe). A building with a 2-pipe system is either entirely in heating mode or entirely in cooling mode.

4-pipe system:

- A 4-pipe system consists of fan coil units with a separate heating and cooling coil, as well as separate pairs of heating and cooling pipes. Hot water and chilled water is always available.

The system is able to instantly switch from heating to cooling mode, or vice versa, and can provide heating to some rooms while simultaneously cooling other rooms.

Pressure drop curve standard coil

Product specifications

Pre-mounted air conditioning unit, the same version in six models for installation in wall or ceiling, freestanding, recessed or exposed with cabinet.

Versions: 2-pipe or 4-pipe connection.

-  **Heating:** Standard equipped for connection to traditional boiler or heat pump.
-  **Cooling:** Standard equipped for connection to chilled water supply (chiller or heat pump).
-  **Ventilation:** Connecting to mechanical ventilation (via ductwork, if desired on return side) or directly connected to outside air via an air mixing box.

Internal frame:

The internal frame consists of a reinforced galvanized steel plate (18ga) and a condensate drain pan (for vertical and horizontal installation) with gravity drainage, complete with self-extinguishing, anti-condensation insulation on the side, back and front panels of the unit. Internal frame to be no deeper than 220 mm (8.7").

Exposed casing:

- The casing shall be fabricated with 18 gauge electrolytic galvanized steel and will be coated epoxy polyester baked at 392 °F. Available in two colors as standard white or grey metallic. Custom colors available upon request.
- The top grille shall provide supply air and bottom shall provide return.
- The casing front face shall be constructed of a single uniform piece seamless in construction.
- The casing shall be fabricated such that there are no exposed corners or gaps. All corners shall be joined to form one solid piece – gaps are not permitted.
- The casing shall be factory parts warranted for 10 years.

Coil:

High-quality aluminum - copper coil with hydrophilic coating. The coil consists of four rows seamless tubes of pure red copper, connected with pure aluminum fins and brass collectors equipped with a patented low pressure drop hydronic header.

- Rated for 217PSI working pressure.
- Easily removable for maintenance if required.
- Blue hydrophilic coating.
- The coil shall have ASTM G53 certification.
- Each fan coil configuration shall have EN442/EN16430 certification. Output correction factors will not be considered equivalent to establish output capacities.
- Includes NPT-connections. No adapters for No adapters for North American threads will be accepted.
- Rated for 217PSI working pressure.
- Easily removable for maintenance if required.
- Blue hydrophilic coating.
- The coil shall have ASTM G53 certification.

- Each fan coil configuration shall have EN442/EN16430 certification. Output correction factors will not be considered equivalent to establish output capacities.
- Includes NPT-connections. No adapters for North American threads will be accepted.

Hydronic connection:

Standard coil ¾" connection on the left. Also available with hydronic connection to the right. With an air vent, drain valve and anti-rotation lock for quick connection. Additional 2nd coil ½", connection on the left. Also available with hydronic connection to the right.

GREEN-TECH Fan unit(s) by EBM Papst:

An electronically commutated (EC motor) centrifugal fan with double intake, with static and dynamically balanced aluminum or ABS fan units. The inverter is driven by a single-phase voltage 120VAC 60Hz and is controllable via a 0-10VDC analog signal. The motor is provided with internal protection.

Electrical connection: standard to the right of the appliance. Connection terminals (grounding, 115 VAC (200-240VAC)*, 0 ... 10 V). Supply Voltage 115 VAC (200-240VAC)* / 60 Hz.

*For Briza HP

Fan operation at 5.8V allows for significant air throw with sound pressure under 35dBA, without any connection to duct work.

Filter:

Replaceable filter made of synthetic fibers (filter class MERV 4), removable from the front of the unit.

Terms of Use:

For indoor spaces. The device is not intended for installation or use in damp areas, such as laundry rooms (IEC EN 60335-2-40).

Conforms to the following guidelines:

- ETL Intertek 1995
- Provisions of the Machinery Directive 2006 / 42 / EC
- Low Voltage Directive 2014 /35 / EC
- Electromagnetic Compatibility Directive 2014 / 30 / EC

Operating limits:

- Max temperature supply water: 221° F
- Max pressure coil: 217 PSI
- Supply voltage: 115 VAC ± 10%, 60Hz
- Supply voltage: 200-240VAC, 60Hz (for Briza-22 HP)

How to install:

Free space supply and return air:

- Minimum 6" free space supply air device (bottom of device)
- Minimum 6" distance return air (top of appliance)

Options:

- Electrical heating element
- 115 VAC motorised damper: air mixing box with motorized damper with 0...10V control for outdoor air supply
- Wall ventilation grille Ø 5"
- Inlet angle piece 90°
- Exhaust angle piece 90°
- Adjustable air inlet grille for 90° angle

- Exhaust angle piece 90°
- Adjustable air inlet grille for 90° angle pieces

Built-In Ceiling:

- Inlet plenum connection with round flanges, connection Ø 8"
- Thermally insulated exhaust plenum connection with round flanges connection Ø 8"
- Condensate pump mounting bracket

Control option:

JDPC on/off controller (Jaga Dynamic Product Controller). The controller is factory installed and pre-programmed.

Manufacturer Jaga n.v. Belgium.

Type: BRIZA 22 HYBRID BUILT-IN WALL

Type: BRIZA 22 HYBRID BUILT-IN CEILING

What is sound power, sound pressure?

Sound power is the sound production of the device itself (source sound). The sound power is thus regarded as a fixed value independent of the installation situation.

Sound pressure is the perceptible sound. This depends on the installation situation and on various factors:

- Location of the device
- Environmental condition
- Distance to the measured source sound
- Reflection of the sound (depending on the size and the height of the room and the materials used)

Note: The sound power is always higher than the perceived sound pressure.

Reverberation time:

Reverberation time is the time — in seconds — that is needed to lower the sound pressure level by 60 dB after a sound source is switched off. This shows that the reverberation time in a large room will be greater than in a small room. Especially the acoustics and decoration of the room determines the reverberation time.

Sound power

Sound pressure

Built-in HP

Built-in HP configuration

- 1 Casing in reinforced galvanized steel
- 2 Replaceable filter
- 3 Electrical connection, standard right*
- 4 Hydraulic connection: $\frac{3}{4}$ " NPT standard left
- 5 Aluminum-copper coil with hydrophilic coating
- 6 Condensate drain, connection $\frac{3}{4}$ "
- 7 Centrifugal fan(s) with double inlet
- 8 Flanges to connect ductwork

*Same side electrical and hydronic connections available for ceiling mounted units upon request

Built-in HP configuration

TYPE: BPBC/BT

TYPE: BPBC/FT

- Flange on the return air side

- Flange on the supply air side

Options

Electric heater

Electrical resistance, made of stainless steel

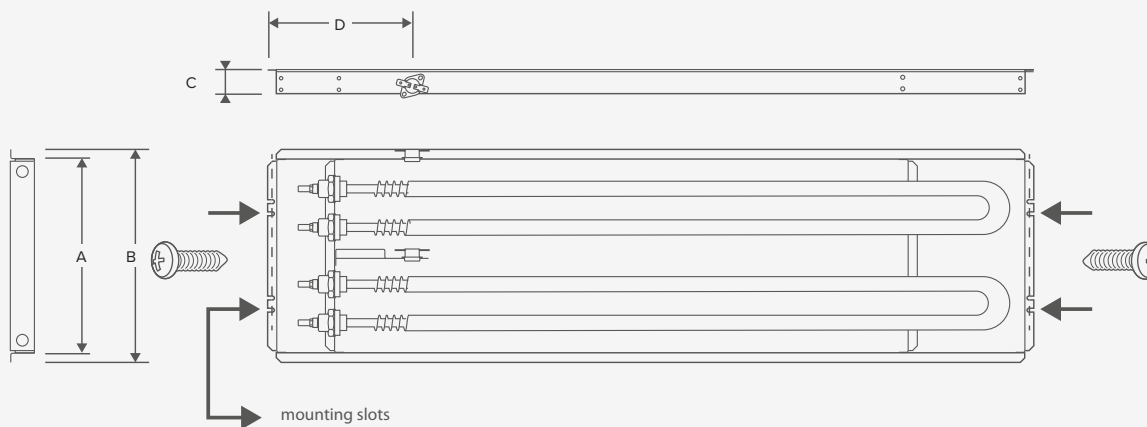

- With safety device for overheating
- With relay

System configuration Briza 22 with electrical resistance:

- Briza 22 standard coil for cooling
- Optional auxiliary electrical resistance for heating

L (cm)	20	22	2.5	15

Mounting

Electric resistance:

- Screw the element against the coil. The mounting slots in the heating element correspond to the punched screw holes in the coil.

Relays:

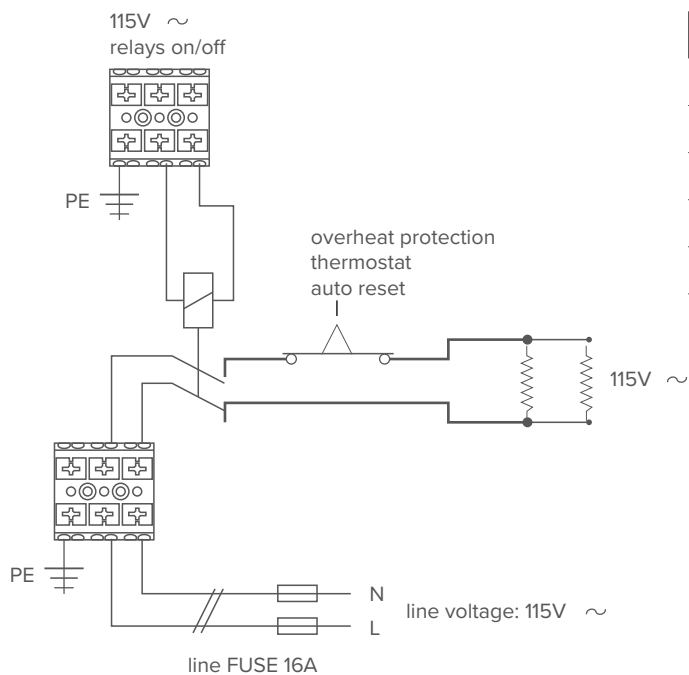

- Screw the relay (with two screws) to the Briza console

⚠ ATTENTION!!

- The electrical resistance must not be switched on without the fan running
- The air outlet grille (on the top of the appliance) must never be covered or closed. Covering the grill can damage the appliance and disrupt the operation of the appliance.
- Ensure free air supply and exhaust

Servomotor 115 V, modulating

Description: modulating damper actuator for adjusting dampers in technical building installations

- Torque motor 5 nm
- Nominal voltage ac 115 V
- Control modulating 2...10 V
- Position feedback 2...10 V
- Adjustable rotation angle with mechanical stops.
- High functional reliability, the actuator is protected against overload, does not require electrical limit switches and stops automatically when the mechanical stops are reached.

Assembly of the corner piece

- Remove the filter at the bottom of the appliance.
- Place this filter in the filter holder of the suction elbow. If not, the filter will no longer be accessible for maintenance or replacement after mounting the suction angle piece.
- When mounting the corner piece on the Briza 22 HP: first remove the pre-assembled flange.

180° PLENUM

Integrated on/off fan controller

JDPC.002

DPC.BRC320 (Heating/cooling two-pipe with room temperature sensor)

DPC.BRC340 (Heating/cooling four-pipe with room temperature sensor)

DPC.BR2220 (Heating/cooling two-pipe without room temperature sensor)

DPC.BR2240 (Heating/cooling two-pipe without room temperature sensor)

The room temperature sensor prevents the fan from starting when there is no dT between room temperature and water temperature, regardless of the water temperature.

- 24 VDC
- 0...10V OUT
- 0...10V IN Window contact
- T^{°r} sensor (room)
- T^{°w} sensor (water)
- T^{°o} sensor (water) Briza 4 pipe
- 8 different modes
- control:
 - no control panel
 - control panel Heating auto boost
 - control panel 3 positions Heating + Cooling
 - 3 key: Heating + Cooling
- valve control 2 Pipe / 4 Pipe

- Total cooling
- Sensible cooling
- Heating
- Standby / Off

Heating:

The device automatically enters heating mode as soon as the water temperature is 39 °F higher than the room temperature. When the watertemperature has a difference smaller than 34 °F above the room temperature, the device automatically returns to standby.

Cooling:

The “total cooling” or “sensible cooling” function is programmed at the factory and depends on the type of device.

Total cooling:

The device automatically enters cooling mode as soon as the water temperature is 39 °F lower than the room temperature. When the water temperature has a difference smaller than 34 °F below the room temperature, the device automatically returns to standby.

Sensible cooling:

The device automatically enters cooling mode as soon as the water temperature is 36 °F lower than the room temperature. When the watertemperature has a difference smaller than 34 °F below the room temperature, the device automatically returns to standby.

Spare parts

ATTENTION!!

For replacement of defective parts, please contact the installer and consult the general Jaga Warranty Terms.
